# PURPOSE

In order to help keep a track of expenses, we designed an expense-tracker application for users to add all of their expenses, divided into multiple categories, and view a detailed summary of how much they are spending.

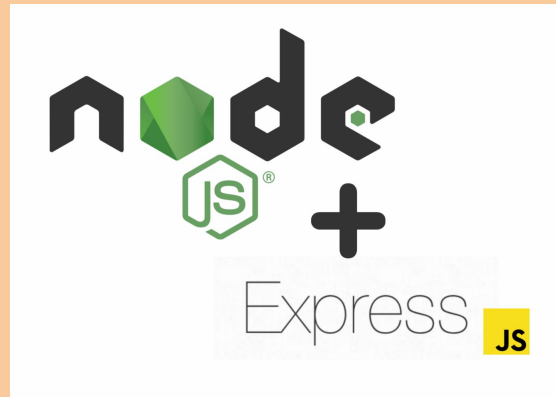

# FEATURES

- **CRUD expenses**
  - **Split expenses into 'expense' and 'income' type transactions**
  - **Group expenses into multiple categories while creating**
  - **Filter expenses using frequency and transactions-type**
  - **View expense analytics with charts and expense types, to see the total transactions and total turnover**
- 

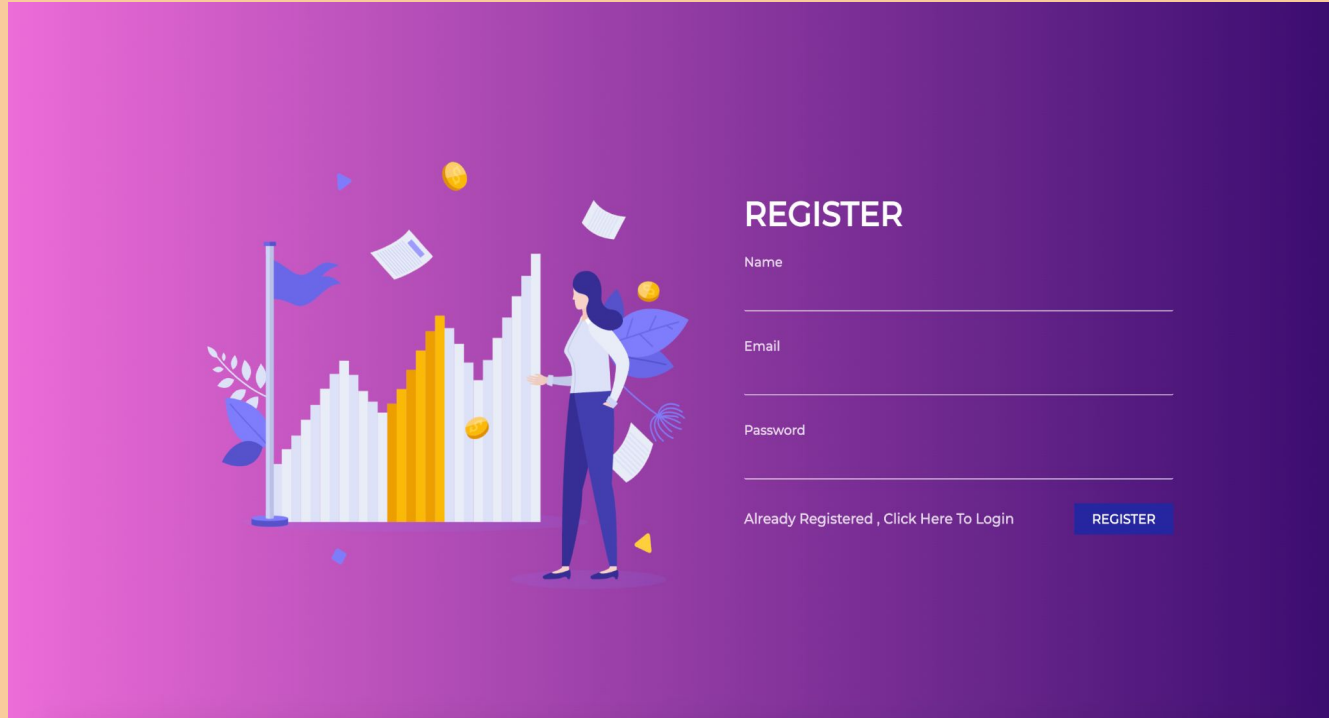

# TECHNOLOGY STACK USED

- HTML
- SASS
- JavaScript
- MongoDB
- React
- ANTD
- Express
- Axios

*Sass*

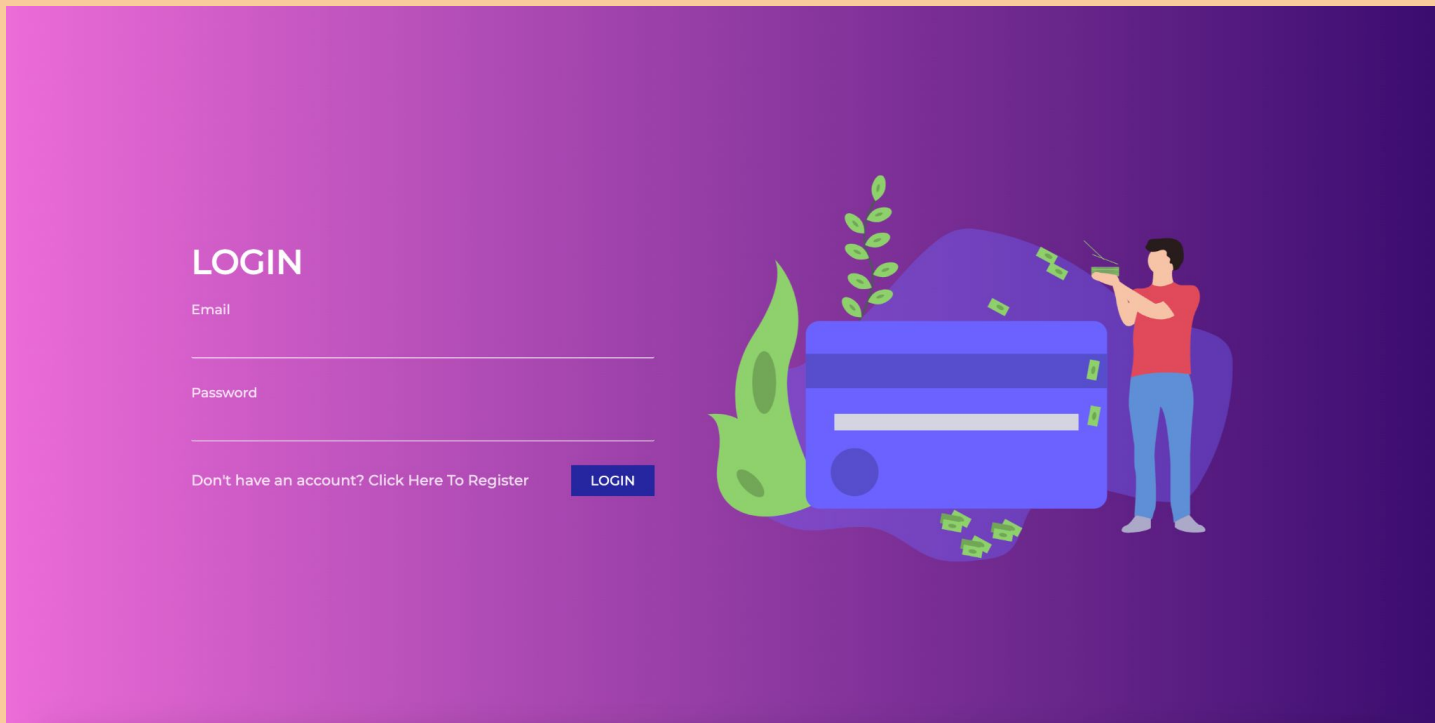

# SCREENSHOTS

The screenshot displays the 'EASY TRACK' application interface. At the top, a dark purple header bar contains the text 'Salary' on the left, 'EASY TRACK' in the center, and a 'test' button on the right. Below the header, the main content area is divided into three sections. On the left, there are two dropdown menus: 'Select Frequency' with 'Last 1 Week' selected, and 'Select Type' with 'All' selected. In the center, a modal window titled 'Add Transaction' is open, featuring a close button (X) in the top right corner. This modal contains several input fields: 'Amount (\$)' with the value '100', 'Type' with a dropdown menu showing 'Income', 'Category' with a dropdown menu showing 'Salary', 'Date' with a date picker showing '12/08/2022', 'Reference' with the text 'test', and 'Description' with the text 'test'. A 'SAVE' button is located at the bottom right of the modal. On the right side of the main content area, there is a table with a header row containing 'Actions' and a table body that is currently empty. Above the table, there is a 'test' button and an 'ADD NEW' button.
